"This book provides a media for advancing research and the development of theory and practice of digital crime prevention and forensics, embracing a broad range of digital crime and forensics disciplines"--Provided by publisher.

First Published in 2000. Routledge is an imprint of Taylor & Francis, an informa company.

Covering a full array of topics in open economy macro and public economics, Fiscal Policies and Growth in the World Economy has been thoroughly revised and extended. The added material in this new edition includes stochastic rational-expectations extensions of the Mundell-Fleming model, the development of a dynamic-optimizing approach of the trade balance, and an entirely new part on issues of international economic convergence, which also contains a comprehensive policy overview. Other chapters have been updated or reorganized, and there is a brief guide to solving typical dynamic macro problems along with a printout of software suitable for numerical simulations. A companion diskette containing solutions in dynamic macro problems and some sample programs is available in GAUSS for IBM. The exercises and solutions manual by Krueger, Ostry, and Yuen has also been updated and extended. Fiscal Policies and Growth in the World Economy has been used successfully in graduate and senior undergraduate courses in international economics and public finance. The objective of this new edition remains the same as before: to treat the major topics in macro and public economics using both traditional and modern approaches. The traditional approach is first explained, from the simple income-expenditure model to the more advanced stochastic Mundell-Fleming model. The modern intertemporal approach is then presented, starting with the simple two-period model and extending it to a full-fledged dynamic model. Other sections review recent developments in the world economy; government spending, budget deficits, and differences across international taxation; and economic growth in the world economy, especially the convergence of income and growth levels across countries.

Designed by two MIT professors, this authoritative text discusses basic concepts and applications in detail, emphasizing generality, definitions, and logical consistency. More than 300 solved problems cover realistic energy systems and processes.

This book is an introduction to set theory for beginning graduate students who want to get a sound grounding in those aspects of set theory used extensively throughout other areas of mathematics. Topics covered include formal languages and models, the power and limitation of the Axiomatic Method, the Axiom of Choice, including the fascinating Banach-Tarski Paradox, applications of Zorn's Lemma, ordinal arithmetic, including transfinite induction, and cardinal arithmetic. The style of writing, more a dialogue with the reader than that of the Master indoctrinating the pupil, makes this also very suitable for self-study.

The United Nations is a vital part of the international order. Yet this book argues that the greatest contribution of the UN is not what it has achieved (improvements in health and economic development, for example) or avoided (global war, say, or the use of weapons of mass destruction). It is, instead, the process through which the UN has transformed the structure of international law to expand the range and depth of subjects covered by treaties. This handbook offers the first sustained analysis of the UN as a forum in which and an institution through which treaties are negotiated and implemented. Chapters are written by authors from different fields, including academics and practitioners; lawyers and specialists from other social sciences (international relations, history, and science); professionals with an established reputation in the field; younger researchers and diplomats involved in the negotiation of multilateral treaties; and scholars with a broader view on the issues involved. The volume thus provides unique insights into UN treaty-making. Through the thematic and technical parts, it also offers a lens through which to view challenges lying ahead and the possibilities and limitations of this understudied aspect of international law and relations.

"A critical translation of the unabridged Italian text of Domenico Bernini's biography of his father, seventeenth-century sculptor, architect, painter, and playwright Gian Lorenzo Bernini (1598-1680). Includes commentary on the author's data and interpretations, contrasting them with other contemporary primary sources and recent scholarship"--Provided by publisher.

This book is the third volume in the Recent Advances in Forensic Medicine and Toxicology series. Volume Two (9789352701247) published in 2018. Divided into five sections, the text provides specialists and trainees with the latest advances and technologies in their field. Section One introduces medical jurisprudence and ethical issues, followed by an extensive section on forensic pathology explaining different causes of death and appropriate approaches to autopsy. Section Three covers forensic radiology and immunology and Section 4 discusses forensic psychiatry examining issues such as sexual crimes, and marriage and divorce. The book concludes with a section on forensic science explaining the role of forensics experts in crime scene analysis and recent advances in examination and investigation techniques. Each chapter has been extensively researched and referenced. Topics are highly illustrated with photographs, diagrams, text boxes emphasising key points, tables and flowcharts. Key points Third volume in Recent Advances in Forensic Medicine & Toxicology series Provides clinicians and trainees with latest advances and technologies in the field Covers specialist topics such as legal obligations and ethical responsibilities Highly illustrated with photographs, diagrams, tables, flowcharts and key points boxes

Operational Expert System Applications in Europe describes the representative case studies of the operational expert systems (ESs) that are used in Europe. This compilation provides examples of operational ES that are realized in 10 different European countries, including countries not usually examined in the standard reviews of the field. This book discusses the decision support system using several artificial intelligence tools; expert systems for fault diagnosis on computerized numerical control (CNC) machines; and expert consultation system for personal portfolio management. The failure probability based troubleshooting expert system for the Airbus A-310; automatic diagnosis of rotating machinery faults; and expert system for naval resource allocation are also covered. This publication is suitable for researchers and specialists interested in the operational expert system applications in Europe.
