NASA and "The Martian". The film "The Martian" takes the work NASA and others have done exploring Mars and extends it into fiction set in the 2030s, when NASA astronauts are regularly traveling to Mars and living on the surface. NASA has collaborated on this film with 20th Century Fox Entertainment, providing guidance on production design and technical consultants, including Jim Green, director of planetary science, and Dave Lavery, program executive for solar system exploration.

Read Book I Martian Nasa

Scientists using an instrument aboard NASA's Mars Atmosphere and Volatile Evolution, or MAVEN, spacecraft have discovered that water vapor near the surface of the Red Planet is lofted higher into the atmosphere than anyone expected was possible. There, it is easily destroyed by electrically charged gas particles – or ions – and lost to space.

Heat and Dust Help Launch Martian Water Into Space ...

The researchers measured 20 times more water than usual over two days in June 2018, when a severe global dust storm enveloped Mars (the

previously considered evidence for subsurface flowing of water are interpreted by new research as granular flows, where grains of sand and dust slip downhill to make dark streaks, rather than the ground being darkened by seeping water. Continuing examination of these still-perplexing seasonal dark streaks with a powerful camera on NASA's Mars Reconnaissance Orbiter (MRO) shows they exist only on slopes steep enough for dry grains to descend the ...
