A compilation of 3M voices, memories, facts and experiences from the company's first 100 years.

#1 bestselling author and acclaimed venture capitalist John Doerr reveals a sweeping action plan to conquer humanity's greatest challenge: climate change. In 2006, John Doerr was moved by Al Gore's *An Inconvenient Truth* and a challenge from his teenage daughter: "Dad, your generation created this problem. You better fix it." Since then, Doerr has searched for solutions to this existential problem—as an investor, an advocate, and a philanthropist. Fifteen years later, despite breakthroughs in batteries, electric vehicles, plant-based proteins, and solar and wind power, global warming continues to get worse. Its impact is all around us: droughts, floods, wildfires, the melting of the polar ice caps. Our world is squarely in a climate crisis and on the brink of a climate disaster. Yet despite our state of emergency, climate change has yet to be tackled with the urgency and ambition it demands. More than ever, we need a clear course of action. What if the goal-setting techniques that powered the rise of today's most innovative organizations were brought to bear on humanity's greatest challenge? Fueled by a powerful tool called Objectives and Key Results (OKRs), *SPEED & SCALE* offers an unprecedented global plan to cut greenhouse gas emissions before it's too late. Used by Google, Bono's ONE foundation, and thousands of startups the world over, OKRs have scaled ideas into achievements that changed the world. With clear-eyed realism and an engineer's precision, Doerr identifies the measurable OKRs we need to reduce emissions across the board and to arrive by 2050 at net zero—the point where we are no longer adding to the heat-trapping carbon in the atmosphere. By turns pragmatic and inspiring, *SPEED & SCALE* intersperses Doerr's wide-ranging analysis with firsthand accounts from Jeff Bezos, Christiana Figueres, Al Gore, Mary Barra, Bill Gates, and other intrepid policy leaders, entrepreneurs, scientists, and activists. A launchpad for those who are ready to act now, this book is geared to leaders in every walk of life. With a definitive action plan, the latest science, and a rising climate movement on our side, we can still reach net zero before it is too late. But as Doerr reminds us, there is no more time to waste.

The first report in a new flagship series, *WIPO Technology Trends*, aims to shed light on the trends in innovation in artificial intelligence since the field first developed in the 1950s.

The Western Christian Presence in the Russias and Qājār Persia, c.1760–c.1870 recalls two long neglected European and North American missionary ventures in

the Caucasus and Imperial Persia. It investigates the activities of Protestant and Catholic missionaries and provides valuable insights on the social and political backdrop of their experiences.

Fashion law encompasses a wide variety of issues that concern an article of clothing or a fashion accessory, starting from the moment they are designed and following them through distribution and marketing phases, all the way until they reach the end-user. Contract law, intellectual property, company law, tax law, international trade, and customs law are of fundamental importance in defining this new field of law that is gradually taking shape. This volume focuses on the new frontiers of fashion law, taking into account the various fields that have recently emerged as being of great interest for the entire fashion world: from sustainable fashion to wearable technologies, from new remedies to cultural appropriation to the regulation of model weight, from advertising law on the digital market to the impact of new technologies on product distribution. The purpose is to stimulate discussion on contemporary problems that have the potential to define new boundaries of fashion law, such as the impact of the heightened ethical sensitivity of consumers (who increasingly require effective solutions), that a comparative law perspective renders more interesting. The volume seeks to sketch out the new legal fields in which the fashion industry is getting involved, identifying the new boundaries of fashion law that existing literature has not dealt with in a comprehensive manner.

The copyright/design interface for a wider, non-specialist audience, taking as a starting point the notion of industrial design derived from design studies, on the border between art and science.

This book provides a comprehensive picture of Venice's shipping industry from the days of glory to its definitive decline, challenging the accepted hierarchy of the political, economic, and environmental factors impacting the history of the maritime republic.

Two billion people worldwide, mainly in developing countries, where diets are based on the consumption of staple crops, suffer from mineral deficiencies, particularly for iron and zinc. Mineral biofortification includes different strategies aimed to increase mineral concentration and to improve mineral availability from the diet (mineral bioavailability) in the edible parts of plants, particularly the seeds. Phytic acid is a compound that strongly reduces mineral bioavailability as, being highly negatively charged, it strongly binds cations, acting as a magnet. All the contributions in this book aim to describe new results, review the literature, and comment on some of the economic and sociological aspects concerning mineral biofortification research. A number of contributions are related to the study of mineral transport, seed accumulation, and approaches to increase seed micronutrient concentration. The remaining ones are mainly focused on the study of low phytic acid mutants.

The Patent Cooperation Treaty makes it possible to seek patent protection for an invention simultaneously in each of a large number of countries by filing an "international" patent application. Such an application may be filed by anyone who is a national or a resident of a Contracting State.
