What are non-Mendelian genetics? Non-Mendelian genetics are basically any inheritance patterns that don't follow one or more laws of Mendelian genetics. Let's review those laws quickly: Mendel's First Law (Law of Segregation) – A parent who has two alleles for a gene can only pass on one allele or the other to each offspring.

Gregor Mendel is known as the father of genetics. His experiments with pea plants created the foundation for our modern understanding of genetics. However, as with most scientific ideas, Mendel didn't quite have the whole picture. Over the years, geneticists have found that not all traits have simple dominant/recessive traits.

Experiments which in previous years were made with ornamental plants have already afforded evidence that the hybrids, as a rule, are not exactly intermediate between the parental species. With some of the more striking characters, those, for instance, which relate to the form and size of the leaves, the pubescence of the several parts, etc., the intermediate, indeed, is nearly always to be seen; in other cases, however, one of the two parental characters is so preponderant that it is difficult, or quite
