1.2 DESCRIPTION The
PMG (Permanent
Magnet Generator) is a
system which is used for

secondary exciting. The PMG provides stable and reliable electric energy for AVR regardless the generator's terminal voltage. The generator with PMG excitation system can provide 300% rated current during short-circuit, which occurs for 5-10 seconds.

User's Manual

This manual describes
how to build a

'permanent magnet
generator' (PMG). We
can also call it an
'alternator', because it
generates alternating
current (AC). It will not
generate 'mains voltage'
or 'utility power' AC. It
generates low voltage,
'three phase' AC, and

then changes it into
'direct current' (DC) for
charging a 12 volt
battery.

field of the rotor is produced by permanent magnets. Other types of generator use electromagnets to produce a magnetic field in a rotor winding. The direct current in the rotor field winding is fed through a slip-ring assembly or provided by a brushless exciter on the same shaft.
