Series Circuits 1. In the circuit shown at the right, a voltage of 6 V pushes charge through a single resistor of $2 \text{ }\Omega$. According to Ohm's law, the current in the resistor (and therefore in the whole circuit) is $I = V/R = 6 \text{ V} / 2 \text{ }\Omega = 3 \text{ A}$. The total of the circuit is the current in the circuit is then A.
