In the city of Villa Park, California, retired businessman Fred Dupree lies dead in his home. His son Forrest, the drummer of an up-and-coming band, Purple Cinnamon, has both opportunity and motive working against him—his father was worth well over six million dollars. Enter Homicide Detective Christie Cloud, who upon investigation of the tampered crime scene begins to suspect that her colleagues' belief in Forrest's guilt might be premature. Following the vicious homicides of three more seniors, Cloud pursues leads across the Pacific Northwest, pitting her against a ruthless L.A. gang member. The first clue is discovered inside the files of a retired Southern California insurance salesman. The members of Forrest's rock band are determined to prove that he is innocent, and end up in the middle of the Seattle strip club scene. Detective Cloud is introduced to the world of ecstasy distribution and the dark side of the billion-dollar insurance business and comes to learn how far those involved will go to protect their investments. The Drummer will challenge readers as they are thrust into a world of crime scene forensics, bizarre sex, and rock n' roll.

This work aims to expand the understanding of sound scattering in architectural spaces as well as the comprehension of its influence on the auditory perception in concert halls. The notion of scattering coefficient, which numerically represents the physical phenomenon of sound scattering, constitutes the main paradigm for the entire work. In a first part, the scattering coefficient is introduced in its meaning and implications. New empirical data of scattering objects have been determined and a revised scale model of a reverberation chamber for avoiding measurement inaccuracies is presented. A case study of classroom acoustics proves the benefit of experimental data on the accuracy of acoustic computer simulations. Furthermore, the implementation of scattering coefficient in different room acoustic computer software is shown by using a concert hall as a case study. In a second part, the relationship between scattering coefficient and auditory perception is explored. Binaural impulse responses have been determined for different scenarios, such as two virtual enclosed spaces and one real concert hall, and convolved with music samples to be used in listening tests. Results from listening tests show how changes in scattering coefficient of diffusing surfaces affect the perception of music among the audience in concert halls.

The most highly-acclaimed jazz theory book ever published! Over 500 pages of comprehensive, but easy to understand text covering every aspect of how jazz is constructed---chord construction, II-V-I progressions, scale theory, chord/scale relationships, the blues, reharmonization, and much more. A required text in universities world-wide, translated into five languages, endorsed by Jamey Aebersold, James Moody, Dave Liebman, etc.

Charlaine Harris's beloved mystery series featuring Lily Bard. In Shakespeare's Christmas, Lily heads home to Bartley, Arkansas– always an uncomfortable scenario for the introverted Lily– for her sister Varena's Christmas wedding. But Lily has more to worry about than being a bridesmaid for a sister to whom she's no longer close. Soon after she arrives in Bartley, Lily's private-detective boyfriend shows up too, and not just for moral support: He's investigating a four-year-old unsolved kidnapping. Try as she might, Lily can't help but get involved when she discovers that the case hits dangerously close to home– for Varena's new husband is the widowed father of a girl bearing a remarkable resemblance to the vanished child.

By combining details of ancient Middle Eastern Musical "Maqam" teachings and the physics of Just Intonation, which describe perfect harmony, Cameron Powers is able to present a simple solution to these musical mysteries. Musicians can now explore the vast collections of ancient musical modes. Great players and singers unconsciously move into these modes. That's what makes them great! Why not make this technique conscious?

(Five Finger Piano Songbook). This collection contains 8 great tunes arranged in five-finger notation that even very beginners can play and enjoy! Includes the songs Charlie Brown Theme * Christmas Time Is Here * Great Pumpkin Waltz * Linus and Lucy * Love Will Come * Oh, Good Grief * Schroeder * and Skating, plus pages of Peanuts artwork.

Understanding of the theories that underpin international political economy (IPE), and their practical applications, is crucial to the study of international relations, politics, development and economics. This is a comprehensive and accessible introduction to the field, with an engaging and coherent foundation to the subject. It considers traditional and alternative approaches to IPE, and in doing so elucidates key concepts, assumptions and the intellectual and historical context in which they arose and developed. At all times, it makes clear their relevance to issues from trade, finance and government, to environment, technology, health, labour, security, migration, development and culture. The book encourages independent reflection and critical thinking through a range of in-text guiding features. In addition, each chapter presents theoretical analysis alongside contemporary issues, helping the reader to relate to the real world of IPE and to better understand how theory helps inform interpretation of it. New to this edition: comprehensively updated to include key coverage of the post-2015 framework of the Sustainable Development Goals, the financial crisis and international government responses - successful or otherwise - to recent challenges; fully updated data, reflective questions, recommended readings, concept and example boxes, and illustrations; new chapters on health, migration and labour; additional coverage of trade theories and key contemporary issues, such as national versus human security, economic versus human development and illegal networks in global trade.
