Book Excerpt: ill destroy us?(Red Cloud)Then is the Sun Man the stronger; it may bebecause of his kindness and wiseness, and becauseof his women.{Young Brave}Is it told that the women of the Sun are goodto the eye, soft to the arm, and a fire in the heartof man?(Shaman)_(Holding up hand solemnly.)_It were well, lest the young do not forget, torepeat the old word again. {War Chief}_(Nodding confirmation.)_Here, where the tale is told_(Pointing to the spring)_Here, where the water burst from under the heelof the Sun Man mounting into the sky_(War Chief leads the way up the hillsideto the spring, and signals to the Old Manto begin)_Read More

The Ford Escort MkII was a worthy successor to the original MkI. It became Ford's most successful rally car and the cars are still winning historic events today. It brought new standards to the sport, inspiring many others to copy it. Contains full details of every 'works' Escort MkII that went rallying, plus driver and personality profiles, and detailed car evolution.

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

Drawing on over hundred years of research into innovation and an in depth research study, the book brings to life the reality of managing established firms to secure advantage through vigilant innovation approaches in disrupting digital era markets. Exploring how organizations manage new offering development focused innovation across a portfolio of core, adjacent and breakthrough environments, the focus is on the search and select phases of the innovation process, and how established firms identify and validate a range of opportunities. Companies face the paradox of how to establish search and select processes for focal markets, while also setting up routines to sense and respond to disruptive innovation signals from adjacent and more peripheral markets. The book builds on research into peripheral vision, and considers how organizations manage the crucial early stages of a vigilant innovation process. The research project at the heart of the book focused on 10 case companies in the publishing sector. The new frameworks developed by the author were informed by over 60 interviews, the innovation literature and the author's experience as a researcher, consultant and practitioner.
