7-inch touchscreen ...

Icon of freedom and multiethnic democracy, memorial to Franco-American friendship—the lofty meanings we accord the Statue of Liberty today obscure its turbulent origins in 19th-century politics and art. Francesca Lidia Viano reveals that vibrant history in the fullest account yet of the people and ideas that brought the lady of the harbor to life.

After his death Thorstein Veblen was hailed as 'America's Darwin and Marx' and is normally portrayed as the perennial iconoclast. He severely criticised traditional economics and attempted to create an alternative approach based on a much more complex view of human beings. He is one of the most celebrated economists of our age and has been the inspiration for many books; the predatory version of capitalism we now again experience, the phenomenon of studying cultures of consumption and the darker sides

of gilded ages can be traced back to Veblen. A conference in Veblen's ancestral Norway marked the 150th anniversary of his birth. The aim of the conference was to consolidate Veblen scholarship and evaluate his relevance for the problems of today. This collection offers the results of that endeavour; it is a milestone of Vebleniana which assesses all the most salient aspects of his life and influence. Many of its contributors also push into uncharted territory, examining the man and his work from new and necessary perspectives hitherto ignored by scholarship.

A systematic treatment of current crashworthiness practice in the automotive, railroad and aircraft industries. Structural, exterior and interior design, occupant biomechanics, seat and restraint systems are dealt with, taking account of statistical data, current regulations and state-of-the-art design tool capabilities. Occupant kinematics and biomechanics are reviewed, leading to a basic understanding of human tolerance to impact and of the use of

anthropometric test dummies and mathematical modelling techniques. Different types of restraining systems are described in terms of impact biomechanics. The material and structural behaviour of vehicle components is discussed in relation to crash testing. A variety of commonly used techniques for simulating occupants and structures are presented, in particular the use of multibody dynamics, finite element methods and simplified macro-elements, in the context of design tools of increasing complexity, which can be used to model both vehicles and occupants. Audience: An excellent reference
